Admin Guide — Relish Torte Dashboard

Open `static/access-control.html` in a browser (renamed from `admin.html`; the old URL no longer exists). Everything below happens client-side; there is no server to run.

---

1. Logging in

How to reach the login: the dashboard has no link anywhere on the site. On any page, **click the "Relish Torte" logo in the header three times quickly** — an owner-access panel pops up. Enter your email and password to unlock the dashboard.

Method	When it works
Email + password (`admin@gmail.com` / `1234` by default)	Anywhere, including `file://` — change it in the dashboard (see §2 → Content → Admin account)
Google sign-in	On the deployed HTTPS site once a Google OAuth Client ID is configured

The session lasts until you close the tab (`sessionStorage`). Click **Log out** to end it early.

> **Set up Google login (no backend needed):** 1. Google Cloud Console → **APIs & Services** → **Credentials** → **Create credentials** → **OAuth client ID** (type *Web application*). Add your site origin (e.g. `https://relish-torte.netlify.app`) to **Authorised JavaScript origins**. 2. Paste the Client ID into `static/js/config.js` → `GOOGLE_CLIENT_ID` and your Gmail into `ADMIN_GOOGLE_EMAIL` (only that address is allowed in). 3. Redeploy. Your email + password keep working as a fallback everywhere.

---

2. The four tabs

Dashboard

- **Greeting** with today's date and a live status (open 24/7, always).
- **Stat cards** — orders this month, revenue, average order value — each with a trend arrow

vs. the previous month.

- **30-day chart** — orders per day (Chart.js when online; hand-drawn canvas fallback offline).
- **Ask Torte week-in-review** — one-click AI summary of the week's activity.
- **Most ordered** — top items by quantity.
- **Order pipeline** — every order as a card with a status pill:

`New → Confirmed → Baking → Done` . Click a card to open the side sheet:

- full item breakdown + total + customer details

- change status inline
- **WhatsApp reply** button → opens a chat with a pre-written confirmation for that order
- copy order reference (`RT-XXXX`)
- **Customer feedback** — post-order survey responses (stars, taste/packaging/delivery, comments) with an overall average.
- **Ratings queue** — product star ratings waiting for approval; approve to publish the average on the menu, hide to discard (undo toast).

Menu

- Every item with photo, category, price and status.
- **Edit price** — click the price, type, Enter to save; an **Undo** toast appears for a few seconds.
- **Live / Bestseller** switches — take an item off the menu or feature it instantly.
- **Image** — open the image manager (see §3).
- Changes save to `rt_menu_overrides` and appear on the site immediately.

Reviews

- Submitted reviews queue here first with status **Pending**.
- **Approve** publishes to `reviews.html` and the home carousel; **Reject** removes it; **Hide** takes a published one down. Every action has an **Undo** toast.

Content

- **Admin account** — change the email and password used to unlock this dashboard.
- **About** — story headline, paragraphs, founded line, brand promise (saves → `about.html`).
- **Why Us / How to Order** — edit the bullet lists that feed the home page strips.
- **Gallery (designs portfolio)** — add/edit/remove: title, caption, image, order.
- **Our Space (shop & décor photos)** — same CRUD; these fill the About page photo grid.
- **Hero slides** — add/reorder photo slides for the home hero carousel.
- **Export / Import** — download `relish-content-YYYY-MM-DD.json` or upload one to merge content into another browser (this is how edits travel between devices until Supabase sync).

---

3. Image manager (preview → Apply)

Used by Menu images, Gallery, Space and Hero slides.

1. Click **Change image** on any item.
2. Provide the image either way you like:

- **Paste a URL** (stock photo, your CDN, anything HTTPS), or

- **Upload a file** (it is resized to 1400 px and compressed to JPEG in the browser).

1. A **live preview** appears — the image exactly as the site will show it.
2. **Apply** to commit, **Cancel** to discard — nothing changes until you Apply.

> Uploaded images are stored in the browser (`rt_image_overrides`) and counted against the ~5 MB localStorage budget; the panel warns you before it gets full. For permanent, cross-device images, host the file and paste its URL instead.

---

4. What customers do (and what you'll see)

Customer action	Lands in
Submits the order form	**Dashboard** → **Order pipeline** (New) *and* their WhatsApp
Sends a WhatsApp message	Your WhatsApp directly (24/7 number)
Submits a review	**Reviews tab** (Pending)
★-rates a product	**Ratings queue** (Dashboard)
Completes post-order survey	**Customer feedback** (Dashboard)
♥ likes a product	No action needed — likes show immediately
Edits prices/images/content	Not customer-reachable — admin only
Newsletter sign-up	`rt_newsletter` (export via Content → Export)

---

5. Safety notes

- **Storage is per-browser.** Approving a review on your laptop won't show it on your phone.

Use **Export / Import** to move data, or wait for Supabase sync (planned).

- **Login details** are stored in this browser only — anyone with the file and your password

can edit, so keep the deployed URL and your password private.

- All admin actions have **Undo toasts** — misclicks are recoverable.
- Back up with **Export** before bulk edits.

---

6. Troubleshooting

Symptom	Fix
Login rejected	Default is `admin@gmail.com` / `1234`. If changed, check `localStorage → rt_admin_creds`, or reset by clearing site data
Chart looks blank	Offline — the canvas fallback should draw; refresh
Uploaded image not saving	Browser storage full — delete old uploads or use URLs
Edits vanished	Storage cleared or private-browsing — Export regularly
Site looks broken after edit	Admin has Undo on every action; otherwise re-import backup
